

2024

New YellowScan CloudStation Bundles.

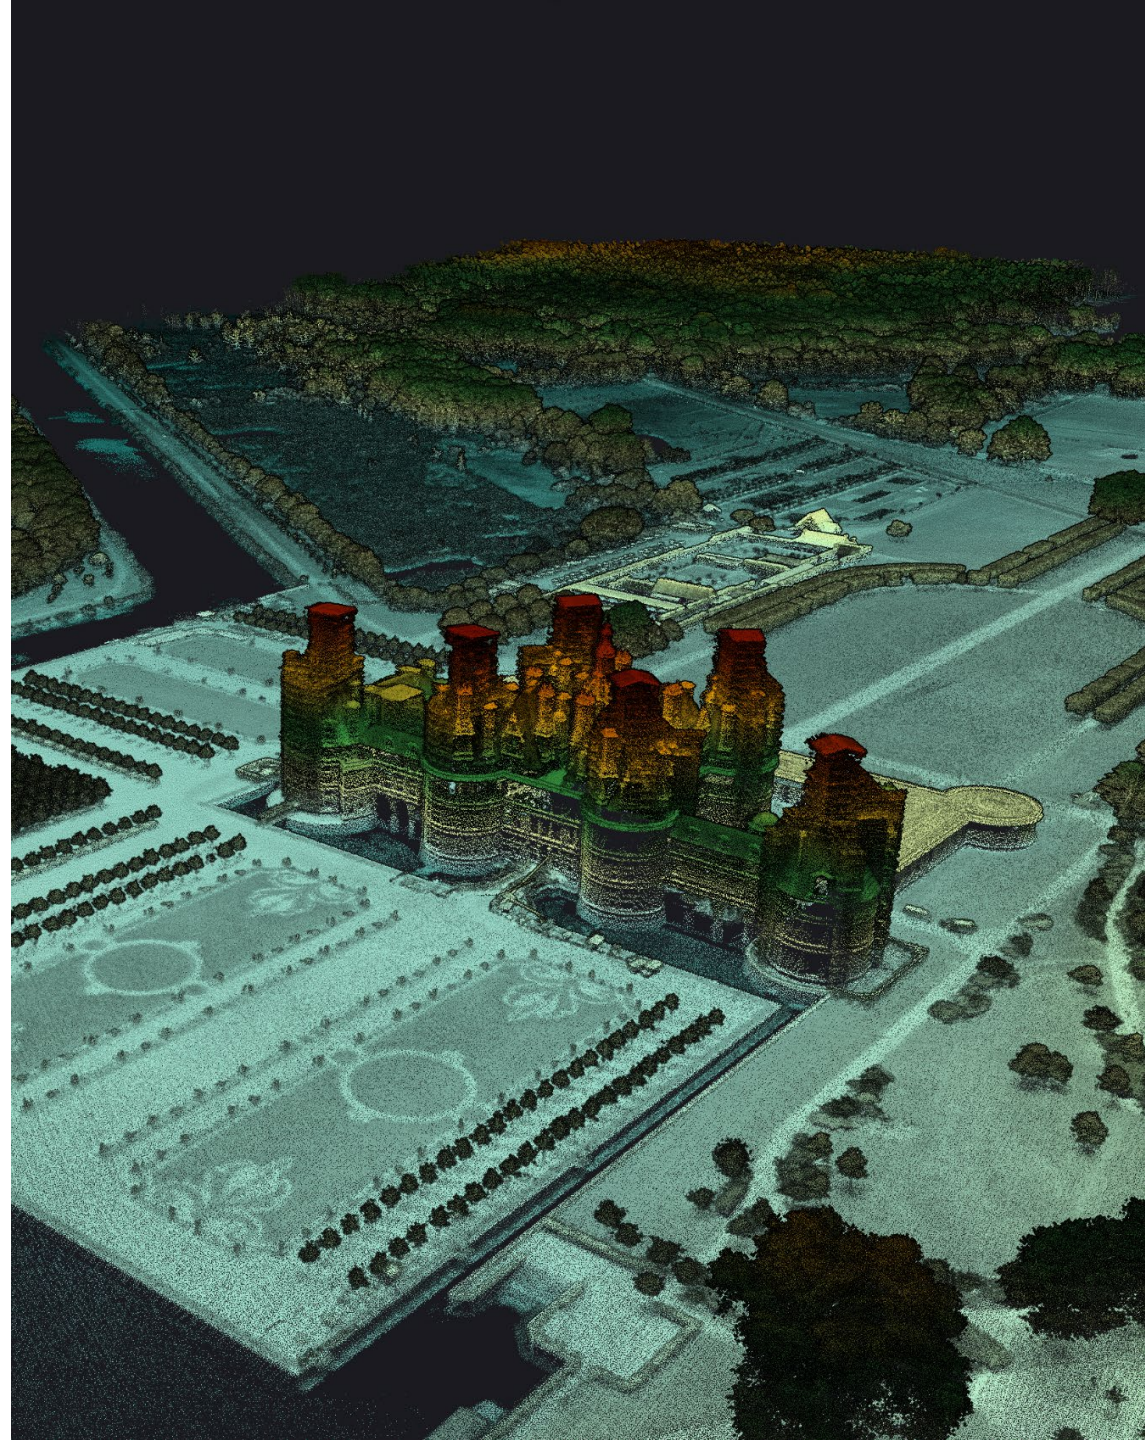

A comprehensive, evolutive and scalable software offer.

YellowScan

Designed to innovate.

About YellowScan CloudStation.

- YellowScan's proprietary software, designed from the ground up
- Carries on the "Just Press the Yellow Button" philosophy for simple data generation, refinement and enrichment.
- Designed with performance and **evolution** in mind

The Old Modules Offer.

On top of the necessary CloudStation Core software.

Strip adjustment

Enhance the accuracy of the pointcloud with a seamless adjustment of flight lines

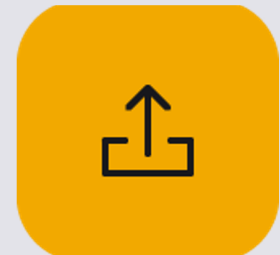

Terrain

Automatic "ground-non-ground" classification of points

Colorization

Pointcloud colorization from simultaneous LiDAR and camera acquisitions

Export

Pointcloud export in LAS/LAZ format

Digital model export: DSM, DTM, DHM

The Old Modules Offer.

- Clutter from variable licensing mode: annual / perpetual
- Clutter from variable maintenance schemes
- Clutter from existing amount of modules
- Clutter from upcoming features: where?

A total of 15 combinations of software that can be licensed in 225 ways – what a nightmare for all!

→ It's time to simplify and offer less clutter and more value.

Introducing CloudStation Bundles.

CloudStation Essential

Visualize, inspect, colorize from orthophotos, and export your data.

Free upgrade from Core*

CloudStation Pro

Visualize, inspect, refine your data quality, enrich your data with classification and color, and unlock more export features.

Free upgrade from any module*

CloudStation Ultimate

Zero compromise, all features activated.

Also includes Command Line (*ytk*) processing for automation & batching.

New bundle!

*With active maintenance

Introducing CloudStation Bundles.

New

Feature Description	Essential	Pro	Ultimate
Georeference Raw YS data	•	•	•
Strips timestamps management (auto + manual)	•	•	•
Iterative water classification (<i>Navigator</i>)	•	•	•
POSPac & Qinertia integration: Easy SBET generation within CloudStation.	•	•	•
Remove Outliers	•	•	•
Colorization from Orthophotos	•	•	•
Export in multiple formats	•	•	•
✚ Upload to ATIS.Cloud services (<i>June update</i>)	•	•	•
✚ Import GCP files		•	•
✚ Display GCP in the Viewport along with the point cloud		•	•
Robust Strip Adjustment Algorithm		•	•
Precise (Time-Dependent) Strip Adjustment Algorithm		•	•
Utilize GCPs during Strip Adjustment to constrain accuracy		•	•
✚ Cut Overlap		•	•
Colorization from Images		•	•
Strip Adjustment Report (accuracy, precision, mismatch..)		•	•
Export DTM, DSM, DHM and Hillshade		•	•
✚ YTK: Command line / batch processing			•
✚ Orthophoto generation			•
✚ Automated Trajectory QC (<i>Part of the upcoming QA/QC Module</i>)			•

The CloudStation Workflow.

Easy as 1, 2, 3!

1

/ Extract

With the SBET generation embedded in CloudStation, extracting and visualizing your point cloud is quick and easy!

2

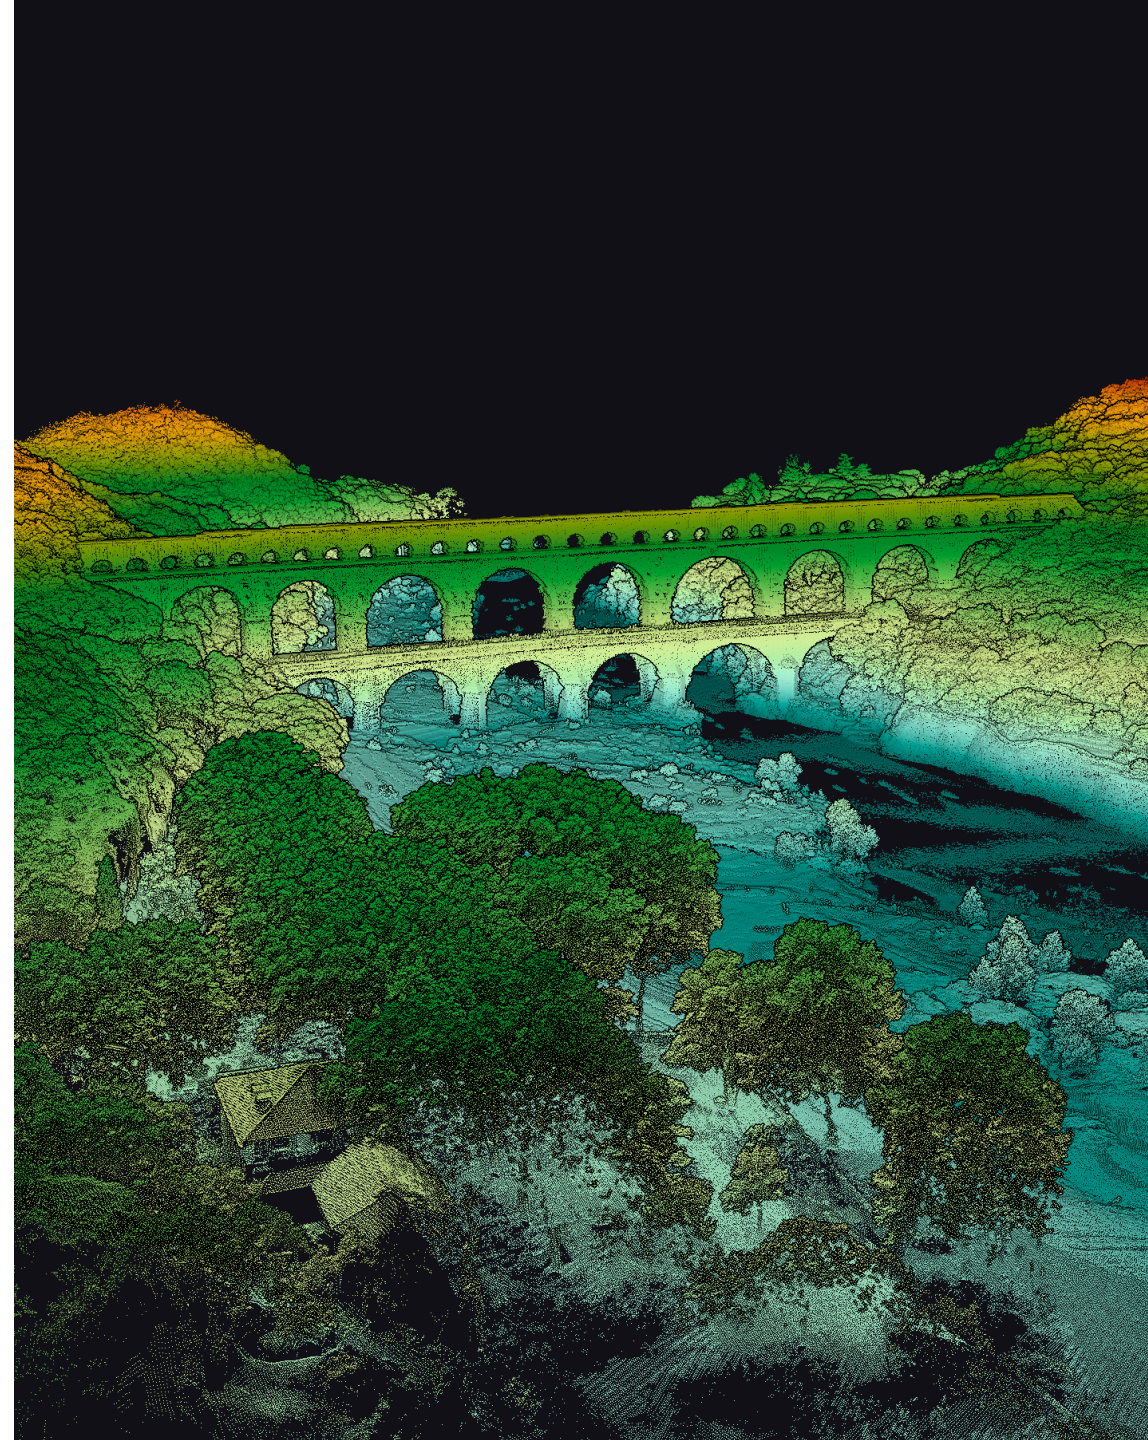

/ Refine & Enrich

Increasing the quality and value of your data is a breeze.

3

/ Export

Point cloud, digital model or orthophoto, in a click!

New Features Rundown: GCP.

Anybody said GCP?

3 different types of GCPs:

△ Tie Point: Constraint point that can be used during the Strip Adjustment process.

◇ Check Point: Verification point. Not to be used in the Strip Adjustment process.

○ Point of Interest (POI): Notable locations. These have no impact on data refinement.

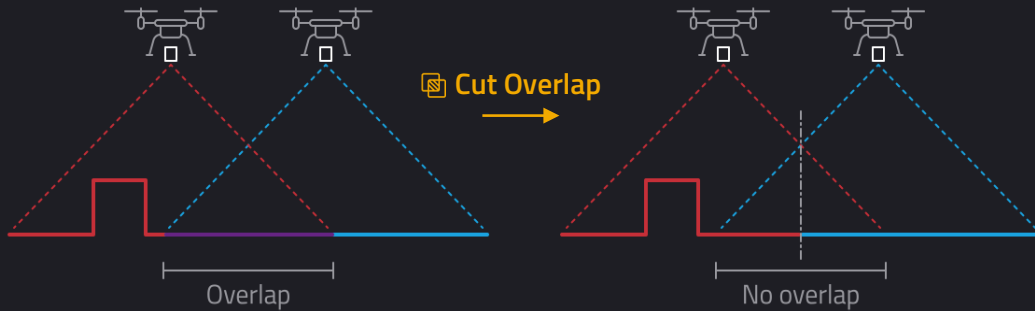

⚠ You will need to import GCPs here to use them in Strip Adjustment

Pro

New Features Rundown: Cut Overlap.

Many data, handle them!

- One button operation
- Remove unnecessary overlap data before export
- Only keeps closest point as quality usually scales with distance
- Points aren't entirely removed, only tagged and hidden

New Export type selector: point cloud, digital model, ortho

The usual export settings: name and CRS

Two pixel size strategies

- **Fixed:** enter your desired pixel size
- **Multiple of GSD:** Input average flight height of mission to determine the GSD then a multiple of the GSD you want for your ortho (1x, 2x, etc.)

Exact same settings as in Colorization from Photos

EXPORT

Orthophoto

Settings

Base name: Coulondres

Coordinates: EPSG:2154

Output folder: ...oup/export

Properties

Strategy: Fixed

Pixel Size: 0.02 m

Flight settings

Flight 01

☒ Use external camera module

Calibration profile: ...li - EV1 Nadir VX Coulondres

Image folder: ...20220427-100314/IMG

Flight 02

Flight 03

Export

Ultimate

New Features Rundown: Orthophoto.

Took a photo, now make it ortho.

About:

- Located in the export section
- Similar settings to Colorization
- Generates and exports the orthophoto at the same time

Main perks:

- **Reduced overlap needs**
Because we use LiDAR data, we only need ~35% overlap to generate an orthophoto.
- **One button generation**
Select your pixel size and generate – simple as that

Try the new cross-platform PowerShell https://aka.ms/pscore6

PS C:\Users\thibaudc> ytk -h
YellowScan Toolkit: highly efficient, batch-scriptable, multi-core command line tools
Usage: C:\Program Files\YellowScan\CloudStationNightly\bin\ytk.exe [OPTIONS] [SUBCOMMAND]

Options:
  -h,--help          Print this help message and exit
  -c,--config         Read an ini file
  --version          Display the version

Subcommands:
```

Ultimate

New Features Rundown: ytk.

- CloudStation, with no User Interface
- All done through command line
- No guardrails, for **experimented users!**

CloudStation Bundles Product Codes.

Product Code	Item
CloudStation Ultimate / Products	
LKPCSUL00	CloudStation Ultimate Perpetual License
LKMCSUL02	CloudStation Ultimate Maintenance Extension
LKACSUL00	CloudStation Ultimate Annual Subscription
LKACSUL02	CloudStation Ultimate Annual Renewal
CloudStation Ultimate / Upgrades	
LKACSEU00	CloudStation Upgrade from Essential to Ultimate Annual Subscription
LKPCSEU00	CloudStation Upgrade from Essential to Ultimate Perpetual License
LKACSPU00	CloudStation Upgrade from Pro to Ultimate Annual Subscription
LKPCSPU00	CloudStation Upgrade from Pro to Ultimate Perpetual License
